

Limited time offer!

FREE Dell NAS storage offer

Sure, disk space is cheap. We're even giving it away for free. But while the cost of disk space keeps going down, the cost to manage it keeps going up. Adding more disk space to your jam-packed servers may be a solution in the short term, but it will cost you five to ten times the disk purchase cost to manage it over time. To really control your storage growth, you need to leverage the policy-based storage growth controls with StorageCentral SRM.

Let's face it, disk space doesn't last very long unless you can monitor how it's being used, prevent junk files from clogging it up, set quotas to control space abusers, and run cleanup reports for data migration and file grooming. StorageCentral SRM can get back 30% of your disk space that's wasted and reduce your storage growth rate by 30%.

StorageCentral SRM is the world's leading storage resource management solution, used by over 4,000 companies in 50 countries, including Microsoft and 80 of the Fortune 100. StorageCentral SRM provides patented TruStor™ real-time monitoring and enforcement of storage quotas, and was selected as Windows 2000 Magazine's editor's choice among all quota management tools.

So go ahead, throw more disk space at the problem. We'll even give it to you free. But let StorageCentral SRM manage your storage growth for you. Hurry, this offer ends soon! Call 1-800-829-3453 (703-758-0707).

POWERSVULT™ 715N
